EXECUTIVE
SUMMARY

Taranis Novus (TNL Tech-Group) is a professional services firm that focuses on providing Integrated Information Management Solutions for small, medium and large enterprises. The company caters to clients in Financial, Fintech, e-governance, aerospace, automotive, commercial printing, education, publishing, military and defense, medical, and technology markets. Taranis Novus Limited (TNL Tech-Group) is a VAR to couple of multi-tier, highly scalable solutions with distributed architecture that can manage the growing information storage and management needs of very large enterprises with many locations. Most of the solutions we deploy integrate all important EDMS technologies to deliver a one-stop Ready-to-Run solution that requires no 3rd party software add-ons or complex integration.

Taranis Novus Limited (TNL Tech-Group) is one integrated consulting firm that offers services in Imaging, Document Management, ERMCOLD, Storage Management (magnetic and optical jukeboxes), Web Clients, Workflow, Event Management, and many other options. At Taranis Novus Limited (TNL Tech-Group) Inc, we are able to easily integrate our line of chosen solutions with your existing IT environment. Taranis Novus Limited (TNL-Group), endeavors to empower every member of your organization, at any location, by giving them immediate & transparent access to all information, no matter where it might be stored, in a cost effective way. We endeavor to be scalable in all endeavors from a small departmental solution up to enterprise wide deployment for thousands of users at multiple locations

We work with flexible architectures that allow for quick integration with other line-of-business applications to deliver more comprehensive and productive business solutions. Most of the products we offer can plug into or integrate easily with current business solutions in areas like Customer Relationship Management (CRM), Supply Chain Management (SCM), Enterprise Resource Planning (ERP), Customer Information Files (CIF), Business Intelligence (BI), and other solutions. Taranis Novus Limited (TNL Tech-Group) is a consulting company specializing in the design and development of quality, innovative information technology solutions for dynamic businesses, non-profit, financial institutions, fintech and government organizations. With over 100 years of professional experience combined in the areas of information technology, our solutions help organizations to facilitate growth, compete more effectively, reduce costs, and work more efficiently.
EXECUTIVE SUMMARY

Taranis Novus Limited (TNL Tech-Group) understands that technology is not an end in itself for most organizations, and therefore, we seek to design information technology solutions that incorporate an organization's strategic and business objectives. We build long-term relationships with our clients, engaging each client at a higher level than would be possible otherwise. We back this client-centric focus with outstanding customer service and support, as well as a relentless commitment to quality in all aspects of our business.

Taranis Novus Limited (TNL Tech-Group) implements a wide range of information technology solutions including custom developed cloud and web solutions, enhancement of existing software applications, software application integration, database management systems, business intelligence, hyper-automation, Data Sciences, Artificial intelligence, machine-learning, and security infrastructure. Functionally, we focus on CRM, project management, and accounting solutions. We employ highly experienced, certified professionals and utilize best-in-class tools to implement the highest quality information technology solutions.

Taranis Novus Limited (TNL- Tech-Group) serves a diverse client base across all sectors of the economy including private industry, government, and non-profit organizations. Our clients come from diverse industry backgrounds including financial services, telecommunications, media, construction, hospitality, professional services, consumer products, industrial, and health care. We serve businesses of all sizes, ranging from small businesses to Fortune 1000 companies. Taranis Novus Limited (TNL Tech-Group)'s clients share a common desire to increase revenue, reduce costs, improve customer service, improve workforce collaboration, and increase resource utilization.

SYSTEM
INTEGRATION

TNL tech-Group as system integrators, our services cover the process of bringing together different subsystems or components into one cohesive and efficient system. This can involve integrating hardware, software, and networking components to ensure that they function together as a unified whole. System integration services are crucial for ensuring that different parts of a system work seamlessly together to support the overall objectives of an organization.

Our System integration services encompass a wide range of activities, including:

- **Consulting and Planning:** Assessing the existing systems and infrastructure, understanding the client's requirements, and devising a plan for integrating new components.
- **Custom Development:** Creating custom software or applications to facilitate the integration process or to bridge gaps between existing systems.
- **Data Integration:** Ensuring that data can flow smoothly between different systems and databases, often involving data migration, data transformation, and data synchronization.
- **Testing and Validation:** Rigorously testing the integrated system to ensure that it functions as intended and meets the specified requirements.
- **Deployment and Support:** implementing the integrated system into the production environment and providing ongoing support and maintenance.
- **Cloud Integration:** Integrating on-premises systems with cloud-based services and applications, or integrating multiple cloud services together.
- **Enterprise Application Integration (EAI):** Connecting various enterprise applications and systems, such as CRM, ERP, and HRM systems, to streamline business processes.
- **Security Integration:** Ensuring that security measures are integrated across the system to protect against potential vulnerabilities and threats

System integration services are provided by our specialized IT team or system integrators who have expertise in integrating complex and diverse technologies. These services are essential for organizations looking to streamline their operations, improve efficiency, and leverage the capabilities of various technologies to achieve their business objectives.

INFRASTRUCTURE
SERVICES

AUTOMATION SERVICES

TNLtech-Group cloud automation services encompass a broad range of tools and practices designed to automate the management and deployment of cloud resources and applications. These services help organizations streamline their operations, improve efficiency, and reduce manual intervention in tasks such as provisioning, configuration, scaling, and monitoring of cloud infrastructure. Here are some key categories of our cloud automation services:

- Infrastructure as Code (IaC)
- Configuration Management
- Container Orchestration
- Continuous Integration/Continuous Deployment (CI/CD)
- Serverless Computing
- Monitoring and Logging
- Security Automation
- Cost Management

DEVOPS SERVICES

TNL tech-Group offer refer to a range of practices, tools, and technologies that facilitate collaboration between software development (Dev) and IT operations (Ops) teams. The goal of our DevOps servicesis to automate and streamline the processes involved in software development, testing, deployment, and infrastructure management. Here are some of our key DevOps services:

- Continuous Integration (CI) and Continuous Deployment (CD)
- Infrastructure as Code (IaC)
- Containerization and Orchestration
- Monitoring and Logging
- Configuration Management
- Version Control
- Cloud Services
- Security and Compliance

These are just a few examples of the many services and practices that fall under the umbrella of our DevOps services. The specific services utilized by a given organization will depend on its unique requirements, technology stack, and organizational culture.

DATA
SERVICES & MINING

TNL Tech-Group Data science and mining services encompasses a wide range of services and applications, including but not limited to analyzing large datasets in discovering patterns and trends for gaining insights towards making informed business decisions. Successful data mining involves defining the objectives of the analysis, relevant data gathering and application of appropriate algorithms for interpreting the results towards making strategic business decisions. Some of these services include:

- **Data Collection and Integration**: Gathering and consolidating data from various sources, such as databases, APIs, and files.
- **Data Cleaning and Preprocessing:** Identifying and rectifying errors, missing values, and inconsistencies in the data to ensure its quality and usability.
- **Exploratory Data Analysis (EDA)**: Analyzing and visualizing data to discover patterns, trends, and relationships that can guide further analysis.
- **Statistical Analysis**: Applying statistical techniques to understand and interpret data, including hypothesis testing, regression analysis, and more.
- **Machine Learning and Predictive Modeling:** Building and training models to make predictions or decisions based on data, such as classification, regression, clustering, and recommendation systems.
- **Natural Language Processing (NLP)**: Processing and analyzing human language data, including tasks such as sentiment analysis, language translation, and text generation.
- **Deep Learning:** Utilizing neural network architectures to handle complex and large-scale data, including image recognition, speech recognition, and natural language understanding.
- **Data Visualization:** Creating visual representations of data to convey insights and findings effectively, using tools such as charts, graphs, and dashboards.
- **Big Data Analytic** Handling and analyzing large volumes of data that traditional data processing techniques may struggle to manage.
- **Data Mining:** Applying techniques to discover patterns and knowledge from large datasets, often using methods from machine learning, statistics, and database systems.
- **A/B Testing and Experimentation:** Designing and analyzing controlled experiments to assess the impact of changes or interventions on user behavior or system performance.

OUR
CORPORATE
PROFILE

History

Taranis Novus Limited (TNL Tech-Group) incorporated has been operational since 2023 as a limited liability corporation, initially as a spin-off of Taranis Novus Limited, incorporated both in Nigeria and South Africa to focus on general IT solutions. In that brief period of existence with combined 100 years of experience of the founders in different industries: Financial, automotive, commercial printing, education, publishing, medical, and technology markets we are geared and excited to offer our services to clients needs with our presence in Africa. We are determined to serve the needs of that market in terms of proprietary and custom needs, while still honoring our commitment based on our third-party relationships.

Company Size & Location

Taranis Novus Limited (TNL Tech-Group)Incorporated started with 6 employees from the spin off from Taranis Novus incorporated, but increased its human resource strength within a short period of time to 15 staff. We do engage temporary staff on a need basis, and have a consistent use of 40-50 temporary staff on the average this year alone. We do operate from our operational headquarters in Ilupeju Lagos and specialize in Turnkey IT solutions

Strategic Alliance & Partnerships

Temy Rowlands Associates Inc is affiliated with many IT Solutions Providers either directly or through 3rd party affiliations either as Resellers, VAR or Technical partners among which are NGGroup, Eccentex , and GNI Softwares.

Clientele

Our client base spans Nigeria and other African countries. We are currently engaged as consultants to a couple of SME's on document management capture and migration. All other client disclosure is available on request.

OUR
